# What's different in your product?

## Turn your smartness inside out

---

### Product Name

SMARTEdge4.0 Next Generation

### Product description

It is designed to support an extensive set of real-time digital capabilities close to the operators in the shopfloor by avoiding major latency issues which represent today limited effective use of CLOUD applications in real production.

SMARTEdge4.0 Next Generation adds to the basic intelligent multi-protocol data collection, data fusion, exogenous alert management and wired and wireless data transfer.

In accordance with our IIoT paradigm named CLOUD DRIVEN EDGE COMPUTING, the new AI techniques coupled with the SMALL DATA paradigm can be supported directly by SMARTEdge4.0.
